SUMMARY

Software engineer with a backend and e-commerce / integrations background, now building across the stack with applied AI/LLM, data science, and IoT projects. A proactive learner, attentive listener, and collaborative team player.

WORK EXPERIENCE

Software Engineer — Hubql
May 2025 – Present

- Building backend services for an AI-assisted campaign management platform (Node.js, TypeScript, serverless).
- Integrating large language models (LLMs) into automated lead-engagement workflows.
- Built the front-end 3D model viewer for a 3D/BIM collaboration platform using React and Three.js (react-three-fiber / drei).

Senior Associate Software Engineer — Pomelo Fashion
Nov 2023 – Apr 2025

- Developed product review and style gallery features to improve customer engagement.
- Integrated a third-party shipping management system to streamline logistics operations.
- Implemented QR payment by integrating a payment gateway, improving checkout efficiency.

Backend Software Engineer — Brikl
Feb 2022 – Sep 2023

- Built integrations for US and Canadian tax calculations.
- Designed and maintained integrations between the Brikl e-commerce platform and third-party systems.
- Developed and maintained GraphQL endpoints powering the dashboard and storefront.

Software Engineer Intern — Tonic
Aug 2021 – Nov 2021

- Built dashboard, subscription, and payment pages for a web application.
- Developed RESTful APIs enabling seamless user interactions on the web app.

PROJECTS

EEG + Posture Wellness Dashboard
Team Hackathon

Real-time wellness dashboard on a NeuroSky TGAM EEG sensor and an Arduino UNO Q. A Web Serial bridge streams raw EEG to a Python backend that runs FFT band analysis, blink detection, and KNN posture classification, with SQLite persistence and a 20-20-20 eye-rest timer.

Stack: Python · Web Serial · Arduino UNO Q · BLE · NumPy/FFT · SQLite

Time-Series Demand Forecasting
Team Hackathon

Multi-step sales/demand forecasting pipeline using gradient-boosted trees with recursive and 2-step strategies, feature engineering, and backtesting.

Stack: Python · CatBoost · pandas · scikit-learn · statsmodels

EDUCATION

B.Sc. Information & Communication Technology
2018 – 2021

Sukhothai Thammathirat Open University

Doctor of Veterinary Medicine
2009 – 2015

Chulalongkorn University

TECHNICAL SKILLS

Backend	Node.js, Express.js, Nest.js, GraphQL, REST APIs, Serverless, Python
Database	PostgreSQL, MySQL, MongoDB, Supabase, Prisma, SQLite
Frontend	React, Next.js, Vite, TypeScript, Tailwind CSS, Three.js
AI & Data	LLM integration, OpenAI API, pandas/NumPy, scikit-learn, CatBoost, OpenCV
IoT & Hardware	Arduino (UNO Q / Nano 33), Web Serial, BLE, signal processing (FFT), NeuroSky EEG
Tools & Cloud	Git/GitHub, Docker, AWS, Jest, Playwright, Jira/Linear

ADDITIONAL

- **Languages:** Thai (native), English (professional)
- **Freelance Software Tester — Testlio** (Jul 2021 – Feb 2022): manual testing of web and mobile apps.
- **Grab Partner** (2018 – 2019) · **Veterinarian — Dept. of Livestock Development** (2016 – 2018)
